

Prime Vision ISF Series

Matte White Fixed Frame Screen

USER'S GUIDE – M Type

V 2.0

Thank you for choosing the **Prime Vision ISF** fixed frame projection screen! The **Prime Vision ISF Series** by EPV Screens® leads the industry in quality fixed frame projection screens. Its design features a lightweight aluminum frame with velvet coating that frames its ISF Certified **ChromaWhite** screen material. The **ChromaWhite** is specially formulated to provide diffusion uniformity with accurate color reproduction for a flat spectral response in a controlled room environment.

Please read through this user guide before utilizing the screen. Correct usage and maintenance will ensure a long product life.

In order for the **ChromaWhite** to maintain its projection qualities and optimum performance please refer to the list below for proper maintenance and cleaning.

Care & Use Instructions: *Dust, dirt and scratches on the projection surface will affect the picture quality, please take note of the points below to prevent that from occurring:*

- Use a dry microfiber cloth to remove dust from the screen's surface.
- Do not write or draw on the projection surface
- When cleaning, use a damp microfiber cloth with warm water to remove any marks.
- Never rub or apply pressure when cleaning the surface.
- Never attempt to use any solutions, chemicals, or abrasive cleaners on the screen surface.
- To avoid damaging the screen, avoid touching it directly with your fingers, pens/pencils or any other sharp or abrasive objects.

o.	Center Support Bar	1	1	1	1	1	2
p.	White gloves	2	2	2	2	2	2
r.	Φ3 mm Long Iron (sides) rod / Short rod (top/bottom)	2/4	2/4	2/4	2/4	2/4	2/4

Frame Assembly

Step 1: Place the EPE sponge (foam) sheet on the ground of the area where the screen will be assembled.

Step 2: Position the pieces of the frame on the EPE sponge in the arrangement shown below.

Step 3: Insert *center joint* (a/b) connectors into *one-half of the horizontal frame* (B/C) and secure with the *M4x7 screws* (g) as shown in the illustration below.

Tip: The center joint (b) with the larger diameter holes should be on top.

Step 4: Connect the *elbow joints* (c/d) to the top and bottom sections of the vertical frame. Once inserted, connect the vertical sections to the horizontal frame sections. Make sure all holes are in alignment and the frame pieces are flush (no gaps). They should form perfect right angles.

Tip: The elbow joint (d) with the larger diameter holes should be on top.

Step 5. Secure the elbow joints by fastening them with **M4x7 screws (g)**, 4 at each corner.

Screen Material

Step 6: Put on the **white gloves (p)** and carefully unroll the screen material on a clean surface from the roller to the other side as shown below. The back side of the screen material should be placed upwards.

Step7: Carefully place the screen on top of the assembled frame as shown below. Make sure that the angular **edges** of the frame are not allowed to come into direct contact with the screen material to avoid puncturing.

Step 8: Insert the **rods (r)** through the sleeves according to their corresponding lengths on each edge of the screen as shown below. The short rods (top/bottom) will overlap to secure a firm grasp in the middle areas.

How to attach the springs

Step 9: Hook one end of the spring and secure inside the groove of the frame, use the **spring hook (i)** to attach the spring to the hole located on the screen material's outer edge in the following order.

First connect on four corners, steps 1-4. make sure all four corners are fixed before proceeding with next spring.

Continue to attach the remaining springs to the material in steps 5-12 in the follow order.

Step 10: Insert the Center Support Bar (o) into the upper top groove on the back of the frame with the bottom end near the approximate center point of the frame and rotate it in at an angle so that both ends of the bar are in alignment with the groove.

Installation

Step 11: Measure the overall length and height of the frame and drill holes for the top brackets. Line up the wall brackets with the drilled holes on the installation location and screw them in using a Phillips screwdriver. If not installing into a structural wood stud, use a hollow wall anchor then screw in the M5x50 wood screws with a screwdriver. Make sure the brackets are leveled.

Diagonal Sizes of 150" and below use 4 x wall brackets

Model/Size	X = Wall bracket distance	X1 = Bracket hole distance	Y = Top/Bottom Wall Bracket Height
110"	1280mm (50.39")	30mm (1.18")	1410mm (55.51")
120"	1390mm (54.72")	30mm (1.18")	1530mm (60.24")
135"	1550mm (61.02")	30mm (1.18")	1720mm (67.72")
150"	1720mm (67.72")	30mm (1.18")	1900mm (74.80")
138"	1600mm (63")	30mm (1.18")	1410mm (55.51")

Diagonal Models above 150" require 6 x wall brackets

Model/Size	X = Wall bracket distance	X1 = Bracket hole distance	Y = Top/Bottom Wall Bracket Height
158"	900mm (35.43")	30mm (1.18")	1610mm (63.39")

Step 12: Position the fixed frame screen onto the top wall brackets (fig 1) as shown below and push down at the center of the top of the frame (fig 2) to secure.
