

EPV Spotlights Outdoor-Rated Twilight Series Screens

BOOTH 9024 EPV Screens is introducing the outdoor-rated Twilight series screens, the new solutions for dedicated residential outdoor spaces for nighttime entertainment. The Twilight Electric and Twilight Twin are the ideal projector screens for patios, pool decks, backyards or wherever friends gather outdoors.

The Twilight Electric uses a professional-grade matte white screen material with a wide viewing angle that accommodates small get-togethers or

large-venue celebrations. The Twilight Twin features a front and rear projection surface supported by a tab-tension system. This allows the projection material to stay flat and taut, making it compatible to use with ultra, short and standard throw projectors. The Twilight Series screens include a Radio Frequency remote and wireless 12-volt trigger to coordinate the screen's drop and rise with the projector's power cycle. They are IP33 Rated for outdoor installation and use.

New Noise Cancelling Headphones at B&W

BOOTH 12009 In late June, Bowers & Wilkins, the renowned British specialist audio brand, launched a new premium active noise cancelling wireless headphone, the Px7 S2.

Px7 S2 is built around an all-new acoustic platform designed to deliver unmatched high-resolution sound quality. At its heart are newly developed, custom-designed 40mm drive units, specifically created to suit the requirements of headphone listening. The drivers offer an ultra-fast response—allowing them to faithfully reproduce every nuance in a piece of music—while remaining supremely low in distortion, resulting in a more accurate, high-resolution presentation.

SANUS, BOOTH 19035 The SANUS VLT7 Advanced Tilt 4D Premium TV Wall Mount allows you to tilt your TV in four different directions—not only up and down, but now left and right for swivel capability. This mount provides 6.8 inches of extension, allowing even the largest of TVs to achieve the maximum listed tilt range. Large TVs installed on traditional tilting mounts often hit the wall, limiting the maximum tilt that can be achieved. The VLT7 solves this issue by extending from the wall, offering TVs a larger tilt range.

Samsung Expands Home Entertainment Lineup

BOOTH 14017 Samsung's new 98-inch Neo QLED 4K TV further expands the 2022 Home Entertainment lineup to offer an even wider array of options to satisfy end-user needs. The flagship 98-inch QN100B TV offers impressive black detail, 120W Dolby Atmos sound system and a luminous 5,000 nits brightness to provide unmatched HDR10+ specular levels.

Exclusively designed for the QN100B, the TV features a slim fit wall mount, connected stand and special back mount holder for the One Connect Box. The QN100B is one of Samsung's thinnest TVs to date and is wrapped in a 360-degree full-metal design for aesthetics-conscious end users. It is Samsung's first 4K TV capable of playing four sources of 4K simultaneously via the Multi-View feature.
